

Biokube Saturn 200 factsheet

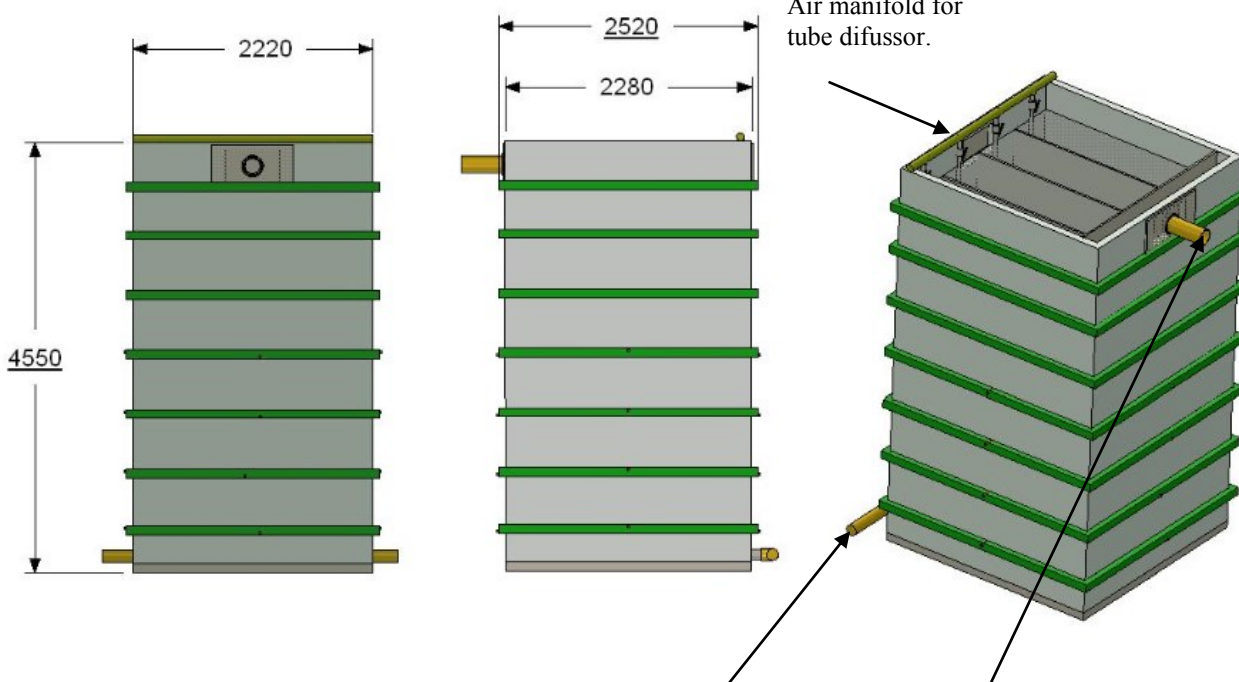

Description of the Biokube Saturn Reactor.

The Biokube Saturn Reactor is the heart of the Biokube Saturn System. The Saturn is for installation above ground..

The steel frame is assembled around the Saturn Reactor onsite.

All in plastic.

The Saturn element and the submerged filter are manufactured by PP, the pipes and diffusers by PVC. The materials is corrosion proof and strong enough to resist the hard physical conditions in wastewater and the hot climate.

Component	Matarial.
Outer tank	Polypropylen UV-stabilized
Pipes	PVC
Diffussores	EPDM and polypropylen

Saturn Model.	Airsupply connection (mm)	Bioblock volume in m3	Weight
Saturn 200	70 mm	13,6	1.150 kg
